

**ABSTRACT OF THE DISCLOSURE**

A wire management system for mechanically protecting and electromagnetically shielding electrical conductors which extend along exposed surfaces of exterior or interior panels, walls, ceilings, floors of structures located in residential, commercial and industrial environments, may be constructed of one or more inner raceways and an outer raceway for containing the one or more inner raceways. The inner raceways may include a channel member having at least one wall that defines an interior space for receiving at least one electrical conductor, and a cover. A shield for reflecting electromagnetic radiation, may be disposed within the walls of the channel member and the cover.
